

By uploading and computing the data for Current Fleet we can observe:

- a Mean of 16.02
- a Median of 15.00
- a Variance of 17.39
- a Standard Deviation of 4.17.

By doing the same for New Fleet, we can observe:

- a Mean of 30.48
- a Median of 32.00
- a Variance of 36.83
- a Standard Deviation of 6.06.

By looking at this values we can depict a double value of the Mean, Median and Variance in the new Fleet, but a small change in the Standard Deviation (only 2 units).
